KlineMOD

Tachograph Remote Download from Front Port

Installation

KlineMOD for front port remote download

The **KlineMOD** is an add-on module that seamlessly integrates with the **digiDL-H** and **digiDL-HX** to enable front port remote download on VDO tachographs.

The **KlineMOD** will arrive automatically linked based on serial number to the **DL-H/HX** for **digicentral** management and does not require separate configuration.

The **DL-H/HX** requires its configuration as normal.

For VDO DTCO version 2.2 and earlier, remote download via the front port must be enabled by inserting a 'VDO Front Interface Update Card'.

VDO product codes:

A2C59512046 - 1 unlock

A2C59512047 - 5 unlock

For VDO DTCO version 3.0 and later, you require a license code which is entered in the tachograph menu.

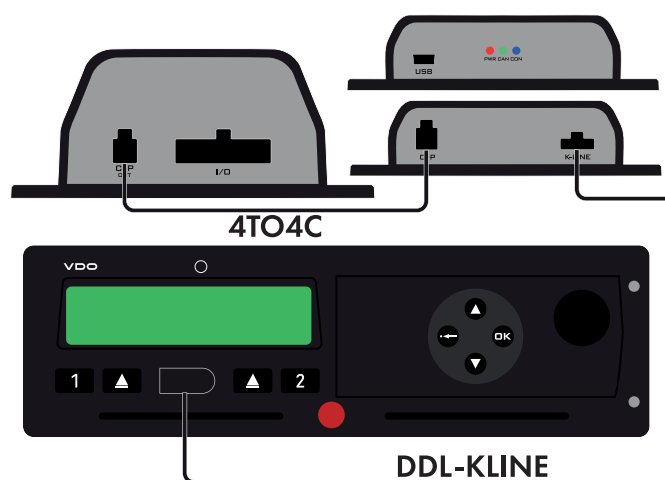

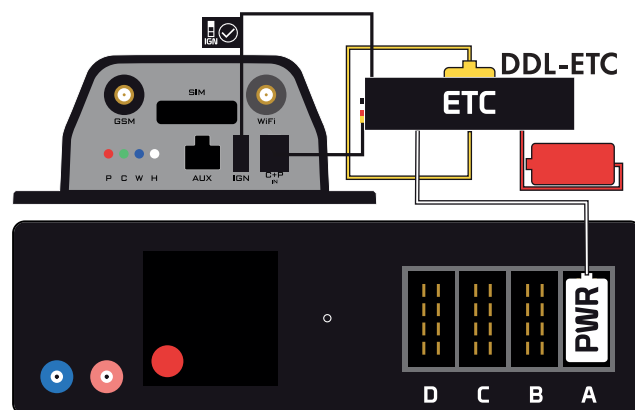

VDO product code:

2910002025700

Install KlineMOD

For full **digiDL-H** or **digiDL-HX** installation steps, please see the '**digiDL-H & HX User Guide**'.

1. Connect the **digiDL-H** or **HX** to the back of the tachograph using the white plug (A) on the **ETC** Cable.
2. Leave the yellow plug (B) in the connector block, unless required for a double plug install.
3. **Do not connect the red plug (C)** as this will prevent the K-Line connection.
4. Plug the ignition wire into the 'IGN' socket of the **DL-H**.
5. Connect the **digiDL-H** or **HX** to the **KlineMOD** using the **4TO4C** cable (provided).
6. Connect the **KlineMOD** to the front port of the tachograph using the **DDL-KLINE** cable.
7. Once everything is installed, with SIM card and **digicentral** settings configured correctly, each light should be solid. The white 'H' light on the **DL-H** should flash off once for every connected device.
