DB02

digiblu

Real-time drivers' hours & tachograph download

Bluetooth tachograph download and real-time data stream.

Key Features

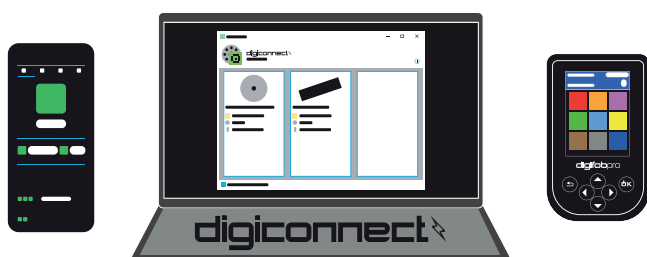

- Bluetooth data to phone, tablet, PC & digifobpro
- Works with Stoneridge, VDO + EFAS tachographs
- Powered by the vehicle unit (no batteries needed)
- Downloaded files can be sent to digicentral
- View real-time drivers hours data in app.

Real-time data straight to your devices

The digiblu plugs into the front of any digital tachograph and utilises Bluetooth Low Energy technology to provide a stream of real-time tachograph data, as well as to download the tachograph files to a number of devices:

- Android phone or tablet (with our apps)
- PC or laptop (with digiconnect)
- digifobpro

If the tachograph has VDO Counter, Stoneridge Duo or intellic iCounter technologies available the real-time data will be 100% accurate.

Android apps & more

To start using the digiblu, simply download the free apps from the Google Play Store.

The digiDriver app provides a real-time data feed which monitors your driver hours and provides visual warnings when you need to take a break.

The digiDownload app supports download of the tachograph data when a company card is present.

This will download the current driver card and the vehicle unit data to your mobile device which can then be emailed or automatically uploaded to a participating tachograph analysis provider.

You can also use the digiblu with a digivu+ card reader to add independent driver card data download.
