digipostpro

Tachograph Data Terminal

Tachograph Data Collected and Transmitted from Any Location

Key Features

- Simple depot solution to collect tachograph data
- Drivers able to upload their own data securely
- Supported by all cloud-based analysis providers
- Actively used in over 15,000 depots
- Built-in EU rules engine

Secure & cost effective

digipostpro is a reliable and secure wall-mounted solution for any depot, warehouse or transport office. It takes the data from the driver card and sends it directly to your analysis service provider using either 4G (mobile network), Wi-Fi or LAN (local area network).

digivu - download key included

The **digipostpro** comes with its own dedicated download key (**digivu**) which allows you to download vehicle unit data from a vehicle's tachograph to automatically transmit to your head office or analysis provider through our **digicentral** server.

Driver card upload

The **digipostpro** allows drivers to upload their own data taking their card from the tachograph and inserting it into the **digipostpro**. The **digipostpro** takes the data and uploads it to **digicentral** where it will be automatically sent to your analysis provider.

Clocking Module

With our clocking module you are able to cater for staff attendance (clocking in and out) without the need for a driver card. You can collect data using RFID cards or tags with two-factor authentication function added with our fingerprint recognition
